Patent Assignee: (NAGA-) NAGAI DENSHI KOGYO Abstract (Basic): JP 62094913

Mfr. comprises (a) forming a valve-functioning metal film on one or both sides of an insulating material by vacuum evaporation plating, (b) forming an enodic oxide film on the metal film, (c) costing a TCNQ complex on the anodic oxide film by vacuum evaporation plating to form an organic semiconductor film, (d) costing a metal on the organic semiconductor film by vacuum evaporation plating to form a carhode film to obtain a base element and (c) coiling the base element and providing electrode lead parts on both ends of the oxided element.

Prof. the insulating material is made of a plastic film or plastic sheet. The TCNQ complex includes 2,2'-bipyridinium (TCNQ)2, 4-bydrony-N-benzylanilinium (TCNQ)2, 4-amino-2,3,5,6-tetramethylanilinium (TCNQ)2, pyridinium (TCNQ)2, 4-eyeno-N-methyl-pyridinium (TCNQ)2, N-ethylquinolinium (TCNQ)2, N-(2-phonethyl)quinolinium (TCNQ)2.

USE/ADVANTAGE - The capacitor does not have any spacer but has the TCNQ complex-contg. organic sentlementation film, and the temp, stability is improved.

MANUFACTURE OF TOROIDAL ELECTROLYTIC CAPACITOR
